Alberta Industrial Products and Processes Index

Alberta, strong and free.

90-05843/

Minister's Message

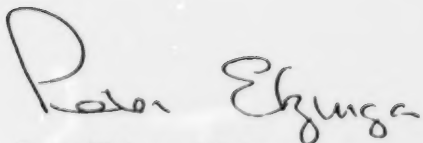
Alberta's manufacturing sector has grown dramatically over the past decade, reflecting the increasing strength and diversity of our provincial economy. As we enter the 1990s, almost 100,000 Albertans are directly employed by the manufacturing sector.

The Industrial Products and Processes Index was developed to increase the profile of the industrial manufacturing and services sector, which forms the core of Alberta's overall manufacturing industry.

I encourage local, national and international prime contractors and project sponsors to use this publication as a guide to Alberta suppliers of industrial products and processes. The index lists over 1000 industrial manufacturers and service companies in the following categories: metals and metal fabricators; textiles, minerals and plastics; petroleum services; electronics; forestry and wood products; and industrial services.

Their products range from aerospace and transportation equipment to industrial and specialty chemicals. Alberta's industrial manufacturers and service providers are exporting more today than ever before, proving that they can meet the demands of the world market.

These firms will play a pivotal role in our future development. Their full participation in the construction and operation of major projects, currently underway or planned for the years ahead, is essential if we are to achieve full benefits from these projects. I look forward to seeing Alberta industrial manufacturers and service providers pursuing opportunities throughout the province and around the globe.



Peter Elzinga Minister
Alberta Economic Development and Trade
